VIDEO BABY GRAND PIANO

"The King of Video Instruments"

The Video Baby Grand Piano is an instrument for the live performance of digital media, sculptured as a baby grand piano.

The Video Baby Grand Piano is designed for use at live concerts, trade shows, exhibitions, bars and nightclubs, and as a high-end home entertainment system. It is also collectible art, in the tradition of fine musical instruments. The Video Baby Grand Piano is also configurable as a highly specialized, broadcast quality, video effects system. It features a built-in, 6 speaker sound system, an EBN Video Jukebox with 20 hours of DV-quality video storage, a pair of EBN Video Turntables. Installations can be highly customized, modifying an existing piano and integrating into the user's specific digital audio/video production environment.

The EBN Video Turntables feature EJ Enterprise's EJ MIDI Turntable System and ScratchTV: an optical needle, playback control vinyl, and cabling to retrofit DJ turntables to output MIDI, along with software for scratching QuickTime movies (<http://www.ejenterprises.tv/>). The EBN Video Jukebox features two high performance XP DV machines and several hundred gigabytes of RAID storage customized by <http://www.DVLABS.com>. Macintosh hardware and OSX applications are also supported. The VBGP is highly scalable, configurable as a Beowulf-style cluster for real-time digital video rendering and presentation. The Video Baby Grand Piano is pre-loaded with EBN video on DVD.
